DETAILED ACTION

1. This office action, in response to the amendment filed 4/10/2003, is a non-final office action.

Response to Arguments

2. Applicant's arguments with respect to claims 1-23 and 27-43 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-23 and 27-43 are rejected under 35 U.S.C. 102(e) as being anticipated by Alidina et al (US 5,987,490).

Regarding claims 1, 19, 27 and 39, Alidina discloses a system and method for decoding Viterbi codes as shown in figure 3. Alidina discloses storing traceback bits in a pair of registers 46.

Regarding claims 2, 3, 12-18, 20-23, 28-38 and 40-43, Alidina discloses a portion of the bits is stored in register gr0 and a portion of the bits is stored in gr1. The register will comprise a number of memory storage components.

Regarding claims 4 and 5, the arithmetic logic units are shown in figure 3.

Regarding claims 6-11, the registers are shift registers.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Simanapalli et al (US 6,029,267) discloses a system and method for decoding Viterbi codes as shown in figures 2 and 3. The traceback bits are stored in a shift register and on bus 18.
